CS 316: Introduction to Deep Learning

Matrix Calculus and Chain Rule Week 3

Dr Abdul Samad

Lecture Outline

- Scalar derivatives
- Vector calculus and partial derivatives
- Chain rule
- Matrix calculus

Common Derivatives

- Derivative of constants. $\frac{d}{dx}c = 0$.
- Derivative of linear functions. $\frac{d}{dx}(ax) = a$.
- Power rule. $\frac{d}{dx}x^n = nx^{n-1}$.
- Derivative of exponentials. $\frac{d}{dx}e^x = e^x$.
- Derivative of the logarithm. $\frac{d}{dx}\log(x) = \frac{1}{x}$.

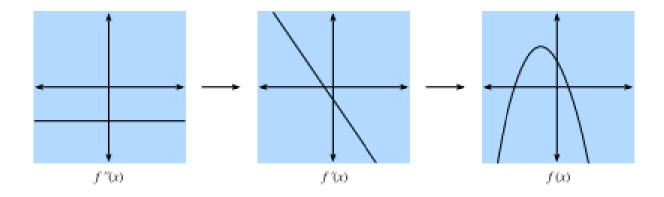

Derivative Rules

- Sum rule. $\frac{d}{dx}(g(x) + h(x)) = \frac{dg}{dx}(x) + \frac{dh}{dx}(x)$.
- Product rule. $\frac{d}{dx}(g(x) \cdot h(x)) = g(x)\frac{dh}{dx}(x) + \frac{dg}{dx}(x)h(x)$.
- Chain rule. $\frac{d}{dx}g(h(x)) = \frac{dg}{dh}(h(x)) \cdot \frac{dh}{dx}(x)$.

Higher order derivatives

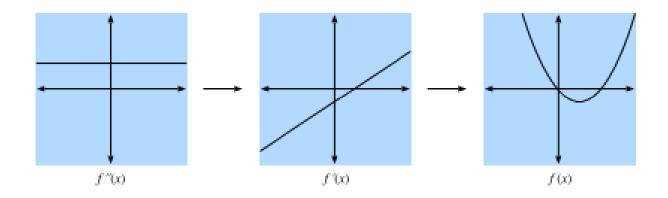

$$f^{(n)}(x) = \frac{d^n f}{dx^n} = \left(\frac{d}{dx}\right)^n f.$$

Visualising Derivatives - 1

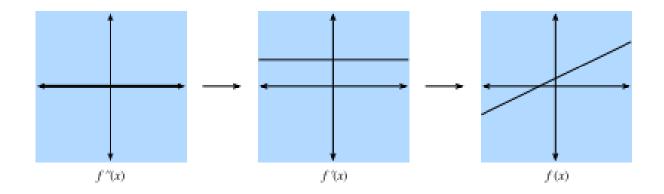

The second derivative is a negative constant, then the first derivative is decreasing, which implies the function itself has a maximum.

Visualising Derivatives - 2

The second derivative is a positive constant, then the first derivative is increasing, which implies the function itself has a minimum.

Visualising Derivatives - 3

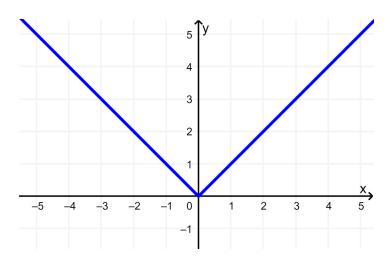

The second derivative is zero, then the first derivative is constant, which implies the function itself is a straight line.

Sub derivative

• Extend derivative to non-differentiable cases

Compute the derivative of f(x) = |x| w.r.t x.

Compute the derivative of f(x) = |x| w.r.t x.

slope= -1

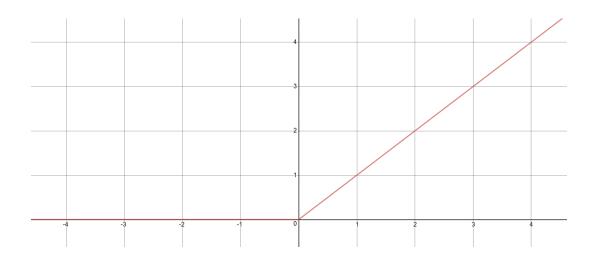

slope= -1

$$\frac{5}{4}$$

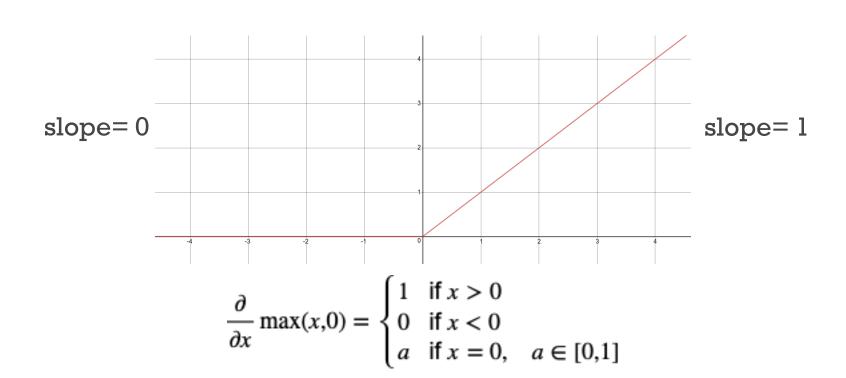

slope= 1

 $\frac{3}{-5}$
 $\frac{-5}{4}$
 $\frac{-3}{-2}$
 $\frac{-1}{-1}$
 $\frac{\partial |x|}{\partial x} = \begin{cases} 1 & \text{if } x > 0 \\ -1 & \text{if } x < 0 \\ a & \text{if } x = 0, \quad a \in [-1,1] \end{cases}$

Compute the derivative of f(x) = max(0, x) w.r.t x.

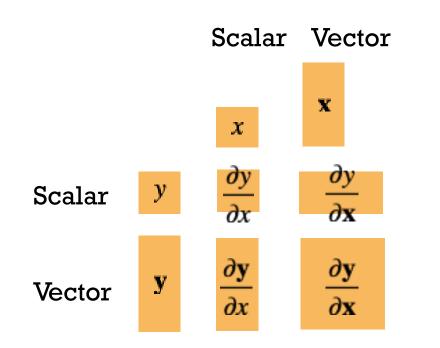

Compute the derivative of f(x) = max(0, x) w.r.t x.

Vector Calculus

· Generalize derivatives into vectors.

Compute the derivative of $f(x_1, x_2) = x_1^2 + 2x_2^2$

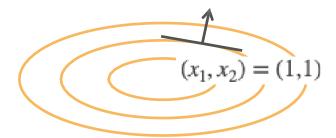

Compute the derivative of $f(x_1, x_2) = x_1^2 + 2x_2^2$

$$rac{\delta f}{\delta x_1}=2x_1$$

$$rac{\delta f}{\delta x_2}=4x_2$$

$$\nabla f(x_1,x_2) = [2x_1,4x_2]$$

Direction (2, 4), perpendicular to the contour lines

$$\partial y/\partial x$$

$$\mathbf{x} = \begin{bmatrix} x_1 \\ x_2 \\ \vdots \\ x_n \end{bmatrix} \qquad \frac{\partial y}{\partial \mathbf{x}} = \begin{bmatrix} \frac{\partial y}{\partial x_1}, \frac{\partial y}{\partial x_2}, \dots, \frac{\partial y}{\partial x_n} \end{bmatrix} \qquad \mathbf{y} \qquad \frac{\frac{\partial y}{\partial \mathbf{x}}}{\frac{\partial \mathbf{y}}{\partial \mathbf{x}}} \qquad \frac{\frac{\partial y}{\partial \mathbf{x}}}{\frac{\partial \mathbf{y}}{\partial \mathbf{x}}}$$

X is a vector and y is a scalar.

Common Derivatives

- Derivative of constant $\frac{\delta}{\delta \mathbf{x}} a = \mathbf{0}^T$
- Derivative of linear function $\frac{\delta}{\delta \mathbf{x}} a \mathbf{u} = a \frac{\delta \mathbf{u}}{\delta \mathbf{x}}$
- Derivative of sum $\frac{\delta}{\delta \mathbf{x}} sum(\mathbf{x}) = \mathbf{1}^T$
- Derivative of L2 norm $\frac{\delta}{\delta \mathbf{x}} ||\mathbf{x}||_2^2 = 2\mathbf{x}^T$

Derivative Rules

• Sum rule
$$\frac{\delta}{\delta \mathbf{x}}(\mathbf{u} + \mathbf{v}) = \frac{\delta \mathbf{u}}{\delta \mathbf{x}} + \frac{\delta \mathbf{v}}{\delta \mathbf{x}}$$

• Product rule
$$\frac{\delta}{\delta \mathbf{x}}(\mathbf{u}\mathbf{v}) = \frac{\delta \mathbf{u}}{\delta \mathbf{x}}\mathbf{v} + \frac{\delta \mathbf{v}}{\delta \mathbf{x}}\mathbf{u}$$

• Dot product
$$\frac{\delta}{\delta \mathbf{x}} \langle \mathbf{u}, \mathbf{v} \rangle = \mathbf{v}^T \frac{\delta \mathbf{u}}{\delta \mathbf{x}} + \mathbf{u}^T \frac{\delta \mathbf{v}}{\delta \mathbf{x}}$$

$$\partial \mathbf{y}/\partial x$$

$$\mathbf{y} = \begin{bmatrix} y_1 \\ y_2 \\ \vdots \\ y_m \end{bmatrix} \qquad \frac{\partial \mathbf{y}}{\partial x} = \begin{bmatrix} \frac{\partial y_1}{\partial x} \\ \frac{\partial y_2}{\partial x} \\ \vdots \\ \frac{\partial y_m}{\partial x} \end{bmatrix}$$

$$y \qquad \frac{\partial y}{\partial x} \qquad \frac{\partial y}{\partial x}$$

$$y \qquad \frac{\partial y}{\partial x} \qquad \frac{\partial y}{\partial x}$$

X is a scalar and y is a vector.

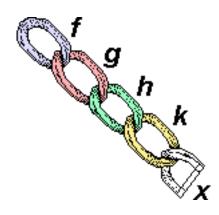

$$\partial y/\partial x$$

$$\mathbf{y} = \begin{bmatrix} x_1 \\ x_2 \\ \vdots \\ x_n \end{bmatrix} \quad \mathbf{y} = \begin{bmatrix} y_1 \\ y_2 \\ \vdots \\ y_m \end{bmatrix}$$

$$\frac{\partial \mathbf{y}}{\partial \mathbf{x}} = \begin{bmatrix} \frac{\partial y_1}{\partial \mathbf{x}} \\ \frac{\partial y_2}{\partial \mathbf{x}} \\ \vdots \\ \frac{\partial y_m}{\partial \mathbf{x}} \end{bmatrix} = \begin{bmatrix} \frac{\partial y_1}{\partial x_1}, \frac{\partial y_1}{\partial x_2}, \dots, \frac{\partial y_1}{\partial x_n} \\ \frac{\partial y_2}{\partial x_1}, \frac{\partial y_2}{\partial x_2}, \dots, \frac{\partial y_2}{\partial x_n} \\ \vdots \\ \frac{\partial y_m}{\partial x_1}, \frac{\partial y_m}{\partial x_2}, \dots, \frac{\partial y_m}{\partial x_n} \end{bmatrix}$$

Both x and y are vectors.

Chain Rule

Generalize to vectors

• Chain rule for scalars:

$$y = f(u), \ u = g(x)$$
 $\frac{\partial y}{\partial x} = \frac{\partial y}{\partial u} \frac{\partial u}{\partial x}$

Generalize to vectors straightforwardly

$$\frac{\partial y}{\partial \mathbf{x}} = \frac{\partial y}{\partial u} \frac{\partial u}{\partial \mathbf{x}} \qquad \frac{\partial y}{\partial \mathbf{x}} = \frac{\partial y}{\partial \mathbf{u}} \frac{\partial \mathbf{u}}{\partial \mathbf{x}} \qquad \frac{\partial \mathbf{y}}{\partial \mathbf{x}} = \frac{\partial \mathbf{y}}{\partial \mathbf{u}} \frac{\partial \mathbf{u}}{\partial \mathbf{x}}$$

$$(1,n) \quad (1,) \quad (1,n) \quad (1,k) \quad (k,n) \quad (m,n) \quad (m,k) \quad (k,n)$$

Matrix Calculus

- Derivative of constant $\frac{\delta}{\delta \mathbf{x}} a = \mathbf{0}$
- Derivative of identity function $\frac{\delta}{\delta \mathbf{x}} \mathbf{x} = \mathbf{I}$
- Derivative of linear function $\frac{\delta}{\delta \mathbf{x}} \mathbf{A} \mathbf{x} = \mathbf{A}$
- Derivative of transpose $\frac{\delta}{\delta \mathbf{x}} \mathbf{x}^T \mathbf{A} = \mathbf{A}^T$

Generalize to Matrices

	\$	Scalar	Vector	Matrix
